RÉCAPITULATIF

Conditions générales: BON
Commentaires généraux: H415 head with top saw option (customer did not use the top saw). New right side outside feed motor this week. New Rotator installed along with head link pins and bushings about 3 months ago. New boom following slew sensor installed, needs to be hooked up (plugged in). DEF Tank cover is being repaired and will be installed tomorrow. Customer has stump treatment tank on a pallet at his shop. Customer just purchased the tracks from McCoy this fall. Extra hoses for the carrier and head. could not see any head cracks. Lower right knife needs pin and bushing, all other 3 knives are tight. No play in the measuring wheel. Auto grease works, customer put manual zerks on steer cyl pins and center pins. Boom slides are good. Cab is decent, needs to be cleaned. Center section is tight.
